DETAILED ACTION

1. Claims 1 to 13 are presented for examination.

Allowable Subject Matter

2. Claims 1 to 13 are allowed.
3. The following is an examiner's statement of reasons for allowance: the prior art made of record teaches a method and an apparatus for a decoder utilizing branch metric calculations. For instance, Hansquine (USP 6333954) teaches a Viterbi decoder with an eight by one butterfly array for an add compare select (ACS) unit that finds the best states. Andoh (USP 6259749 B1) teaches a Viterbi decoder with pipelined ACS wherein a normalized branch metric calculator computes branch metrics and the ACS units operates on two states simultaneously at a time.

Although, the prior art made of record teaches Viterbi decoding with branch metric calculations for multiple trellis butterfly computations, the prior art taken alone or in combination fails to teach or fairly suggest or render obvious the novel element of the instant invention. Specifically, the prior art made of record fails to teach or fairly suggest or render obvious the limitation of "selecting a group of four consecutive states, S_i , S_{i+1} , S_{i+2} and S_{i+3} wherein S_i and S_{i+1} have next states S_j and S_k in a first trellis butterfly and S_{i+2} and S_{i+3} have a next states S_{j+1} and S_{k+1} in a second trellis butterfly" as recited in the independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Liu et al. (USP 5432803) discloses two consecutive states for a convolutional decoder.
